PROFESSIONAL SUMMARY

Data-focused B.Tech CSE graduate (CGPA 8.4) with 6 months of experience building ETL pipelines, cleaning multi-source datasets, and delivering dashboards using Python and SQL. Built and evaluated ML models — Random Forest, Logistic Regression, Decision Tree, Ridge/Lasso Regression — across classification and regression problems, including a live IoT flood-prediction system. Skilled in Power BI (DAX, drill-through analysis, KPI tracking) with working knowledge of Generative AI workflows: Prompt Engineering, LLMs, Agentic AI, and RAG. Seeking a Data Analyst / AI-ML Engineer role to apply Python, SQL, Pandas, scikit-learn, Power BI, and applied ML/GenAI to drive business decisions.

TECHNICAL SKILLS

Languages: Python, SQL, SQLite

Data & Analytics: Pandas, NumPy, ETL Pipelines, Data Cleaning, Excel (Pivot Tables, VLOOKUP), Matplotlib, Seaborn

BI & SQL: Power BI (DAX, KPI Tracking, Drill-Through Analysis) · SQL (JOIN, GROUP BY/HAVING, CASE WHEN, Schema Design)

ML & Tools: scikit-learn, Random Forest, Feature Engineering · Git, Jupyter Notebook, Google Colab, VS Code, REST APIs

Generative AI: Prompt Engineering, LLMs, Agentic AI, RAG, APIs

INTERNSHIP

Data Analytics Intern – SKILLRAACE (EdTech Startup)

Feb 2026 – May 2026

- Built Python ETL pipelines (Pandas, NumPy) to ingest and aggregate structured datasets, cutting stakeholder reporting time by 40%.
- Designed Excel KPI dashboards with pivot tables and conditional formatting for self-serve weekly reporting.
- Standardised and validated 5 raw CSV datasets, resolving 300+ data inconsistencies and improving downstream reliability.

PROJECTS

Superstore Sales Analytics Dashboard

Power BI · DAX

- Built a Power BI dashboard analysing 2014–2017 superstore sales (\$2.30M revenue, \$286K profit, 38K units) with 6+ visualisations, KPI cards, and drill-through reports (Year→Quarter→Month→Day).
- Implemented gauge charts for target tracking, scatter plots for correlation analysis, and DAX-based calculations with dynamic Category/Region filtering.

AI-Driven LoRaWAN Flood Prediction System

Python · scikit-learn · IoT

- Engineered a real-time multi-sensor pipeline ingesting live readings from 5 sensor types via Arduino UNO, transmitted to Python over serial communication.
- Trained 4 independent Random Forest classifiers achieving sub-2-minute flood warnings, cutting emergency response time by 60%.

IBM Telco Customer Churn Prediction

Python · scikit-learn · Classification

- Built and compared Logistic Regression, Decision Tree, and Random Forest classifiers on 7,000+ telecom customer records (30 engineered features) to predict churn, achieving 80.4% accuracy and 0.84 ROC-AUC with the best model.

House Price Prediction — California Housing

Python · scikit-learn · Regression

- Trained and compared Linear, Ridge, and Lasso Regression pipelines on the California Housing dataset, selecting the best model by RMSE/R² and building an interactive mode for live price predictions.

Titanic Dataset — Exploratory Data Analysis

Python · Pandas · Matplotlib

- Analysed 891 passenger records across 12 columns, uncovering a 74% vs 19% female/male survival gap and 2.6x higher 1st-class survival rate.

SQL Relational DB Practice — E-Commerce & Joins

Python · SQLite · SQL

- Designed a 5-table relational SQLite schema with foreign keys and executed 40+ queries (JOINS, GROUP BY, CASE WHEN, 3-way JOINS) across Titanic, Iris, and custom datasets.

EDUCATION

Siddhartha Institute of Science and Technology, Puttur — B.Tech CSE (IoT), CGPA 8.4

2022 – 2026

Rao's Junior College, Nandyal — Intermediate (MPC), CGPA 9.4

2020 – 2022

CERTIFICATIONS & ACHIEVEMENTS

- Ranked in Top 20% nationally among all NPTEL IoT course learners (IIT Kharagpur, 2024).
