PROFESSIONAL SUMMARY

Software Engineer with hands-on experience designing and maintaining Python/SQL-based data pipelines and applied machine learning solutions. Comfortable applying analytical and scientific methods to solve engineering problems independently, from schema design through model evaluation, and collaborating closely with stakeholders to translate requirements into reliable, working systems. Builds sound judgment through varied project work spanning ETL, ML, BI, and IoT, with growing expertise in Generative AI (LLMs, RAG, Agentic AI). Seeking a Software Engineer role to apply and continue developing core software engineering practice.

TECHNICAL SKILLS

- Languages:** Python, SQL, SQLite
- Software Design & Engineering:** ETL pipeline architecture, relational schema design (foreign keys, normalization), REST APIs, Git version control
- Data & Analytics:** Pandas, NumPy, Data Cleaning & Validation, Matplotlib, Seaborn, Excel (Pivot Tables, VLOOKUP)
- BI & SQL:** Power BI (DAX, KPI Tracking, Drill-Through Analysis), SQL (JOIN, GROUP BY/HAVING, CASE WHEN)
- Machine Learning:** scikit-learn, Random Forest, Logistic/Ridge/Lasso Regression, Feature Engineering
- Generative AI:** Prompt Engineering, LLMs, Agentic AI, RAG, API Integration
- Tools:** Jupyter Notebook, Google Colab, VS Code

PROFESSIONAL EXPERIENCE

Data Analytics Intern | SKILLRAACE (EdTech Startup)

Feb 2026 – May 2026

- Designed and maintained Python ETL pipelines (Pandas, NumPy) to ingest and aggregate structured datasets, applying software design judgment on pipeline structure that cut stakeholder reporting time by 40%.
- Worked independently against stakeholder requirements to build self-serve Excel KPI dashboards with pivot tables and conditional formatting, minimising day-to-day supervision needs for recurring reporting.
- Standardised and validated 5 raw CSV datasets, exercising independent judgment to identify and resolve 300+ data inconsistencies, directly improving downstream system reliability.

PROJECTS

AI-Driven LoRaWAN Flood Prediction System — Python · scikit-learn · IoT

- Designed and engineered a real-time multi-sensor software system integrating 5 sensor types via Arduino UNO with a Python serial-communication layer — an end-to-end software/hardware integration requiring original design decisions.
- Trained and deployed 4 independent Random Forest classifiers achieving sub-2-minute flood warnings, cutting emergency response time by 60%.

Superstore Sales Analytics Dashboard — Power BI · DAX

- Built a stakeholder-facing Power BI dashboard analysing 2014–2017 superstore sales (\$2.30M revenue, \$286K profit, 38K units) with 6+ visualisations and drill-through reports (Year→Quarter→Month→Day).
- Implemented gauge charts, scatter plots, and DAX-based calculations with dynamic Category/Region filtering to support self-directed stakeholder analysis.

IBM Telco Customer Churn Prediction — Python · scikit-learn · Classification

- Applied scientific method to compare Logistic Regression, Decision Tree, and Random Forest classifiers on 7,000+ customer records (30 engineered features), selecting the best model by evidence (80.4% accuracy, 0.84 ROC-AUC).

House Price Prediction — California Housing — Python · scikit-learn · Regression

- Designed and compared Linear, Ridge, and Lasso Regression pipelines, selecting the best model by RMSE/R² and building an interactive mode for live predictions.

SQL Relational DB Practice — E-Commerce & Joins — Python · SQLite · SQL

- Designed a 5-table relational SQLite schema with foreign keys — direct application of software design principles — and executed 40+ queries (JOINS, GROUP BY, CASE WHEN, 3-way JOINS).

EDUCATION

B.Tech, Computer Science Engineering (IoT) — Siddhartha Institute of Science and Technology, Puttur

CGPA 8.4 | 2022 – 2026

Intermediate (MPC) — Rao's Junior College, Nandyal

CGPA 9.4 | 2020 – 2022

CERTIFICATIONS & ACHIEVEMENTS

- Ranked in Top 20% nationally among all NPTEL IoT course learners (IIT Kharagpur, 2024).
